LinkedIn: https://www.linkedin.com/in/isaac-striker-a66921380/

SUMMARY

Self-taught and Boot.dev-trained backend and web developer with hands-on experience delivering small production applications end-to-end. Built a multiplayer web game with a Go backend and JavaScript frontend over WebSockets, and a lead-generating website for a local auto repair shop. Comfortable with Python, REST APIs, SQL, and cloud deployment. Seeking another professional role requiring organizational and analytical strengths.

SKILLS

- Languages: Python, TypeScript/JavaScript, Go, C
- Web & Data: HTML/CSS, REST APIs, SQL
- Tools & Platforms: Git, GitHub, GitHub Actions, AWS

PROJECTS

Notris (block-falling game) - https://github.com/isaacjstriker/notris-online

Multiplayer Tetris-style browser game with a Go backend and real-time WebSocket communication.
- Implemented server-side game logic and backend services in Go to keep player state consistent and predictable across connections, handling concurrent users and real-time updates.
- Built the frontend in JavaScript, handling input, rendering, and WebSocket-based communication with the backend.
- Deployed the application on Render, managing build configuration and environment setup, and monitored logs to diagnose and fix bugs and performance issues.
- Structured the code into small, testable components and added checks to guard against invalid state transitions during gameplay.

Convapp - https://github.com/isaacjstriker/convapp

Python web app/script converting Google Sheets .xlsx data into CSVs compatible with proprietary software.
- Designed and implemented an automated ETL-style pipeline to ingest, validate, and transform ~25,000 rows of spreadsheet-based territory data into a clean, structured format ready for import.
- Used pandas to clean and map fields to the target schema, with logging to flag invalid or incomplete records before import, improving reliability and debuggability.
- Reduced a months-long manual migration process to roughly two days while increasing correctness and traceability, significantly reducing operational toil for non-technical staff.

EDUCATION

Boot.dev | Back-End Engineering Curriculum | Completed Aug. 2025 | Profile Link

Completing a rigorous backend engineering curriculum (20+ courses and projects) covering data structures and algorithms, functional programming, web servers, and SQL databases.

Google | IT Support | Completed July 2023 | Profile Link

Completed professional Google IT Support curriculum, which includes 5 courses going in-depth on the fundamentals of information technology including Linux and Windows administration, Cybersecurity, cryptography, internet protocols, and much more.

EXPERIENCE

Web Developer | Precision Motorworks | Aug. 2024 - Present

- Built and maintained the company website, managing both front-end and backend integration
- Implement new features and layout refinements based on user and business feedback, keeping the site fast and reliable.
- Handle day-to-day maintenance, bug fixes, and deployment in a shared hosting environment via cPanel, including investigating and resolving issues affecting availability or performance, and documenting fixes for future incidents.

Accounts Manager | Precision Motorworks | Sept. 2020 - Aug. 2024

- Handle inbound calls to service center, interact and ask diagnostic questions to clients to ascertain issues with vehicles, and handle day-to-day scheduling for all technicians
- Keep organized stock of inventory, make daily checks on supplies and communal tools
- Maintain professional and friendly demeanor with clients, especially in high-tense situations
- Upsell clients when issues requiring immediate attention are found with their vehicle, explaining the benefits of performing services and safety hazards that would come from putting it off
